

Cable modem and TV connections

Cable from face plate
or outside cable

Cable Modem

If you are using the same cable for both your TV and your cable modem, it is very important that the splitter is connected as shown. If the splitter is installed incorrectly, the TV may work but the cable modem may not. Or the cable modem will work but will not work correctly and may transmit at a much higher level that it is supposed to.

Pleae pay special attention to make sure the splitter is connected as shown in the diagram.
